Featured Services

Mudjacking / Slabjacking

Mudjacking or Slabjacking settled concrete slabs, reinstating them to original elevations. Specializing in Sidewalks, Patios, Driveways, Pool Decks, Garage Floors, Steps, Basement Floors, Factory & Warehouse Floors, Ramps, Void Filling & Stabilization.

[FOAM JACKING IS A SUPPORT RISK](#)

Compaction Grouting

Injection pipes allow grout below footings or piles to raise foundations and solidify poor ground conditions. This is a recognized structural engineering process.

[Read More](#)

Compression Pile Underpinning System

Compression Piling is used to raise and underpin foundations that have settled. Steel casings are jacked into the ground until sufficient resistance is met. The foundation is then raised, and casings are filled with concrete.

[Read More](#)

Shotcrete & Guniting Repair Application

Foundations can be repaired using structurally engineered sprayed concrete. The result is a foundation wall that is stronger and much less expensive than new foundation walls.

[Read More](#)

Liquid Backfill

Liquid Backfill is a clay based, water resistant material that can be pumped to improve foundation grading, basement floor heaving and fill voids.

It's also great for refilling new excavations with stable soil material.

[Read More](#)

Liquid Topsoil

Imagine improving the grade around your foundation without shoveling, tampers, wheelbarrows or delivery. Liquid topsoil is applied right where you need it, then compacts quickly.

[Read More](#)

Clay Spray

You have an excavation wall that has either collapsed or is precariously on the verge of collapse due to desiccation or

washout. What do you do?

[Read More](#)

Concrete Pumping

We can do the work for you or rent you a truck mounted concrete and grout pumping unit so you can get the job contracted yourself. We can even provide an operator and/or training.

[Read More](#)

Grain Bin Leveling and Stabilization

In order to maintain a bin's vertical posture, we apply a process called Compaction Grouting to strategically inject an inflating grout bulb along the perimeter, deep into the failing bearing ground base.
