**SERVICE:**

## Shotcrete & Gunite Repair Application

**Associated Processes:** Settled Concrete, Sunken Concrete, Concrete Raising, Slope Stabilization, Shotcrete Foundations, Grading Contractors, BackFill Contractors, Liquid Backfill Contractors, Home Builders, Consultants, Screw Piles, Compression Piles, Foundation Underpinning, Foam Jacking

Shotcrete is a structurally engineered pneumatically sprayed concrete used to repair deteriorating concrete foundations and structures. In addition, it can be used to restructure concrete slope stabilization, make new swimming pools and prevent water erosion control, plus many other applications.

Shotcrete benefits:

- 100% re-structured with Gunitite.
- Local engineers prepare structural drawings and do site inspections which guarantee the work's structural integrity
- Gunitite (sprayed concrete) compacts and builds upon itself, embedding steel reinforcement as it adheres to the existing wall or back-stop form.
- The compacting action of the application produces a very dense, high-strength concrete wall, with improved waterproofing qualities.
- Due to application impact, concrete is forced into the existing walls cracks, and irregularities, creating a permanent bond to an existing surface.
- The resulting foundation wall is structurally superior to new foundation walls, at much less than the cost of replacement walls, which are typically 3 times stronger.
- Work can generally be completed within 2 weeks and in any season of the year, with little disturbance to the occupants.
- Older homes and commercial buildings can be remediated economically (better than new)

### **Services Include**

[Mudjacking/Slabjacking:](#)

Raising settled concrete slabs

[Compaction Grouting:](#)

Raising settled foundations

[Compression Pile Underpinning System:](#)

Raising settled foundations

[Shotcrete & Guniting Repair Application](#)

[Liquid Backfill:](#)

Raising settled grades & cavity fill

### Liquid Topsoil:

Finishing grading

### Clay Spray:

Slope, stabilization and fill

### Concrete Pumping:

Placing concrete into forms
